Process Studies may be defined as referring primarily, although not exclusively, to the philosophy of Alfred North Whitehead and his intellectual associates, most notably Charles Hartshorne. With this focus, *Process Studies* seeks to explore process thought more broadly as it appears in related philosophies and theologies and to apply the Whiteheadian conceptuality to other fields, such as aesthetics, biology, cosmology, economics, ethics, history of religions, literary criticism, mathematics, political thought, psychology, physics, social science and sociology.
